ABSTRACT

PURPOSE: To provide the information recording medium which flexibly copes with unlock due to plural keys and having a good operation convenience.

CONSTITUTION: An unlock designating flag 1 consisting of an 8-bit bit pattern is prepared for each of six keys K1 to K6, and a security flag 2 consisting of an 8-bit bit pattern is prepared for each instruction. When several keys are given to a key collating part 4, unlock designating flags of these keys are read out, and OR among respective bits is operated in an OR operation part 5, and the result is obtained as an unlock status 3. A security deciding part 6 outputs the decision result which permits execution of the instruction which this unlock status 3 satisfies the logical condition indicated by the security flag.
